

## Progress Report - **Project 23**

Giuliano Rasper **2568405**, Jessica Werner **2563327**,  
Stephan Ariesanu **2565385**, Muhammad Kamran **2572847**,  
Alexander Dincher **2563446**, Simon Fedick **2563209**

- Week 12 -

### Progress

We continued arranging our biweekly team meetings. Apart from that, we did many bug fixes and solved some design issues. Furthermore we finished our tests on backend and frontend. At the end of the week we added our test results to the document and cleaned up all documents for the submission.

### Problems

A licence problem with the frontend template had to be cleared up, because Muhammad Kamran used some template that was not compatible with the MIT and he was not allowed to use which we were all unaware of, but all the CSS and JavaScript files got either removed or changed notably.

### Achievements

Finished and delivered project with all the documents. Delivered project on github:

<https://github.com/conference-management/ConferenceManagementTool>

### Team Members

#### **Giuliano Rasper**

Worked on issue #17. Participated in testing described by Alex. Also did all tests necessary for #72 which included writing the test report on communication level (14h).

#### **Jessica Werner**

Worked on licensing problems and frontend cleanup (10-12h), worked on the final submission (2-4h) + minor bug fixes.

**Stephan Ariesanu** Wrote tests on the conference level, updated the style.css

---

file, implemented the feedback from the last meeting. Wrote the test plan and report for the communication tests. Overall 6h

**Muhammad Kamran**

worked on the issues #106, #105, #95, #73 listed below. Besides, worked in css files and html pages all together took 16hrs

**Alexander Dincher**

Worked on the issues listed below (#81, #108, #100), refactored tests according to some changes and add more test cases, fixed small bugs, added with Stephan timos feedback according to our last meeting, tested with Gio, Stephan, Simon, Jessica normal conference behavior, especially iphone behavior, which leads to problems during last meeting, added functionality for one time login for attendees and multi use for admins, added functionality to deleteAllAdmins into the db according to configparser issue, added name of voters to the NamedVotingOption and display the names in voting frontend, added functionality that requests of deleted users are gone, added code that vote can not start if a vote is already running or voting without names of votingoption, refactored functionality that present value is only set by admins manual, added new header color in frontend and fixed wrong time display in create vote section, improved Test Plan document, created Test Report for Backend (approx. 19,5h).

**Simon Fedick**

Tested frontend functionality manually, fixed minor bugs, worked on several issues (#109, #110, #66, #44, #32), refactored and changed up css style files (all together around 18h).

## Issues & Testing

### Issues

**Stephan Ariesanu**

1. **#111 - Some code snipped is selectable when submitting a Change/Speech Request** - this was caused by typo in the name escaping code

**Muhammad Kamran**

1. **#106 - Voting Panel - Starting a voting when there already is an active voting** When admins try to start a created voting while another voting is currently active, the error message given by an alert says "Votings with less than 2 options can't be started", even if the new voting has 2 or more options. This error message is very misleading regarding the actual issue.
2. **#105 - Voting Panel - Certain voting options can't be selected** When a voting gets started, there is exactly one voting option whose radio but-

---

ton can't be ticked (but in case this is the button selected by default when loading the page, the option can be voted for as usual). The ID of this certain option gets incremented with each new started voting, starting from 1 with the first voting started.

3. **#95 - Fix Header and Mobile View**
4. **#73 - Frontend test scripts using JEST**

#### Alexander Dincher

1. **#81 - Logging out Attendees at the end of a Conference** Now the conference logout the attendees at the end of the conference. Closed issue with 336129a9.
2. **#108 - Present status doesn't change when requested** admins can change present value in frontend. Closed issue with 1638c90c.
3. **#100 - Attendee can see submit Button in Document page** Attendees can not see Submit Button anymore. Closed issue with 13eaf07a.

#### Giuliano Rasper

1. **#17 - Code Refinement** Rename variables in packets which refer to WebSocket's since these are general Communication objects by now.
2. **#72 - Test on communication level** Communication has to be tested (at least at the CommunicationHandler's level), especially testing connection limitation as well as some packet functionalities (which do not solely redirect request to the conference level).

#### Jessica Werner

1. **#96 - Cleanup and check Licensing of CSS and JS Files** The whole frontend was a mess of unused libraries and imports that we were in some cases not even allowed to redistribute under the MIT License and the frontend was built on some template that were were not allowed to use (and nobody was aware of that because the corresponding person said we were allowed). This took quite some time to refactor, especially because we needed to check the compatibility of some licenses. Closed with 692e9e71

---

## Simon Fedick

1. **#32 - User Management Panel - Add Popup functionality** Some format to create Attendees from the frontend was vitally necessary. At first, it was solved using different prompts for every single field, which wasn't optimal, so there needed to be more responsive popup windows using JQuery UI. *Resolved with 48a53be1*
2. **#44 - User Management Panel - Select Groups from existing Groups** In the dialog for Attendee creation, there should be an option for the group to be selected from a dropdown menu of existing groups instead of just having to type them in manually every time. *Resolved with 4f74dd67*
3. **#66 - User Management Panel - Present Status for Attendees** The present status needed to have some possibility in the Frontend to be set to "true" (or to "false") when editing an Attendee. *Resolved with ce217f66*
4. **#109 - User Management Panel - Format Control for Attendee CSV Files** The format control from the Create Attendee Dialog wasn't applied to Attendees being added via CSV File. Therefore, these controls were applied in the CSV parser as well. *Resolved with 2853d51a*
5. **#110 - Voting Panel - Voter Names for Anonymous Votings** The results of Anonymous Votings still showed the Names of Voters. *Resolved with 0eb836e8*

## Testing

- Manual testing of the frontend was done with every commit.
- Refactored existing tests to test more cases.
- Added new tests for configparser.
- Finished tests of communication.
